**Re: BOBRICK MIRROR CHANGES**

Following are changes to Bobrick's Mirror line. These changes have been made as part of our mission to deliver high value products to our customers.

**Standard Sized Mirrors:**

The back and hanger system for B-290 2448, B-290 2460 and B-290 2472, will change from a Snap Locking design to a "Lock Tab" design with one "I" bracket as shown on the attachment. These mirrors will continue to have a beveled frame and integral stiffener.

**Special Sized Mirrors:**

The back and hanger system for B-165, B-166, B-290 and B-292 special sized mirrors will change from "Screw Locking" design to a "Lock Tab" design as shown on the attachment. Mirrors that are 30" or greater in width will come with multiple "I" brackets. These mirrors will continue to have a beveled frame and integral stiffener.

**Shelved Mirrors:**

B-166 Channel-Frame Mirrors/Shelf Combination units will be shipped as a separate mirror and shelf. The shelf has four mounting holes to provide a secure and firm installation against the wall. Shelf is constructed of 18 gauge stainless steel, and designed to meet accessible design by protruding less than 4" from the wall.

B-292 Welded-Frame Mirror/Shelf Combination units will remain a one piece unit with a slight modification to the shelf design.

**B-294 Series Angle-Frame Two Position Tilt Mirror**

The standard size for the B-294 mirror has changed to 18" x 30" from 16" x 30". iBob and Bobrick's accessory catalog have been updated to reflect this change. B-294 1630 will be offered as a special and can be entered in iBob as a special.

These changes are effective immediately and we ask for your patience and support during this time of transition.

Sincerely,

A handwritten signature in black ink that reads "John Popovich".

John Popovich
